

JTE MACHINE SYSTEMS

We have your total seaming solutions...

The JTE Shade/Banner Shuttle

This 6kw RF machine is the optimal solution for pocket making and welding hems on vinyl coated shades and banners. JTE has designed the Shade/Banner Shuttle with all the essential features including auto-tuning, for convenient high quality seaming at an unbeatable value.

The Shade/Banner Shuttle includes a 14 foot long sliding table on a 32 foot frame. The precision guided table provides for the quickest possible alignment of consistent and precise pocket welds that result in great looking shades and banners. The front mounted grounding foot helps eliminate stray RF emissions to the industry leading standards that JTE Machine Systems designs and maintains in all of its RF sealing equipment. The front trough and the innovative magnetic strip on top of the table help the user to setup, position and handle the material with ease.

A 48" by 3/8" easy to change, slide-in sealing bar is standard, with other lengths and widths available. The user interface has a 10.4" Touch Screen for optimum operation control and trouble shooting. Two levels of passwords prevent unwanted setting changes during production. Alphanumeric recipes easily recall saved parameters in one screen. Stored information can be used for diagnostics.

The optional JTE Hem Helper, semi-automatic folding and holding system, is available for quick, controlled and consistent pocket forming at a very economical price.
